

Karla Johnson's Son, Brandon MRSA Story

I wanted to share some pictures of Brandon's thumb. I will warn you that they are hard to look at. The first picture was taken Saturday April 14th, and the second picture was taken Tuesday April 17th.

I wanted you to see the healing that has started taking place. Pictures three and four were also taken on Tuesday. I was able to soak the thumb in 2.5 pH acid water from our Enagic Kangen Water machine a couple of times before the surgery, and we use 2.5 pH acid water to irrigate the thumb when changing the dressing each day.

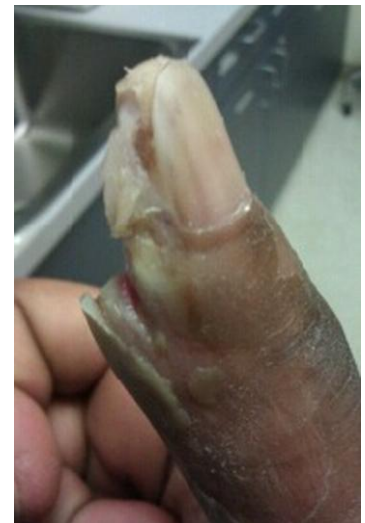

He is also drinking 8.5 pH Kangen Water from our Enagic Kangen Water machine. When he went for follow up appointment on Tuesday April 17th, the doctor was still suggesting that they amputate the thumb. Brandon said not at this time, he will return to see the doctor again in two weeks.

We began to use the 2.5 pH acid water frequently during the day on Brandon's thumb and encouraged him to drink ½ to 1 gallon of Kangen Water a day. You can see by April 23rd there was major healing occurring in Brandon's thumb.

Update 5/2/2012: Two weeks ago the Doctor was ready to amputate Brandon's thumb. Tuesday when he saw the thumb he said "beautiful" and that it looks 1000 times better than it did two weeks ago. Brandon will return to see the doctor in four weeks. He will continue antibiotics for three more weeks. Thank you for your prayers.

Karla
